book jacket

an in depth reference to the naval weapons used by britain germany the us and the other combatants in the
great war with photos superb invaluable history of war although the great war might be regarded as the
heyday of the big gun at sea it also saw the maturing of underwater weapons the mine and torpedo as well
as the first signs of the future potency of air power between 1914 and 1918 weapons development was both
rapid and complex so this book has two functions on the one hand it details all the guns torpedoes mines
aerial bombs and anti submarine systems employed during that period but it also seeks to explain the
background to their evolution how the weapons were perceived at the time and how they were actually
used this involves a discussion of tactics and emphasizes the key enabling technology of fire control and
gun mountings in this respect the book treats the war as a transition from naval weapons which were
essentially experimental at its outbreak to a state where they pointed directly to what would be used in
world war ii based largely on original research this sophisticated book is more than a catalogue of the
weapons offering insight into some of the most important technical and operational factors influencing the
war at sea

john lambert was a renowned naval draughtsman whose plans were highly valued for their accuracy and
detail by modelmakers and enthusiasts by the time of his death in 2016 he had produced over 850 sheets of
drawings many of which have never been published these have now been acquired by seaforth and this is
the third of a planned series of albums on selected themes reproducing complete sheets at a large page size
with an expert commentary and captioning the initial volumes concentrate on british naval weaponry used
in the second world war thus completing the project john lambert was working on when he died his
interest was always focused on smaller warships and his weapons drawings tend to be of open mountings
the kind that present a real challenge to modelmakers rather than enclosed turret guns but he also produced
drawings of torpedo tubes underwater weapons fire control directors and even some specific armament
related deck fittings following the earlier volumes on destroyer and escort armament this one covers the
multitude of weapons carried by coastal forces many of which were improvised ad hoc or obsolescent but
eventually leading to powerful purpose designed weaponry an appendix covers the main deck guns carried
by british submarines of this era the drawings are backed by introductory essays by norman friedman an
acknowledged authority on naval ordnance while a selection of photographs adds to the value of the book

as visual reference over time the series will be expanded to make this unique technical archive available in published form a move certain to be welcomed by warship modellers enthusiasts and the many fans of john lambert s work
