the end of driving automated cars sharing vs owning and the future of mobility second edition examines the complex intersection of vehicle automation public policy and social change it analyzes two competing models for the deployment of driving automation privately owned automated or highly automated vehicles versus on demand driverless vehicles robotaxis and argues that while robotaxis could offer superior urban mobility achieving this outcome requires deliberate policy choices drawing from early deployments through 2025 this book explores how automated vehicles could advance public

interests including social equity environmental sustainability and urban liveability but only with thoughtful system design and implementation this thoroughly updated second edition examines the psychological factors influencing transportation choices that will make private vehicle ownership persist explores the challenges of roads where human drivers and self driving vehicles will operate simultaneously and proposes innovative approaches like flexible on demand transit and targeted financial incentives to encourage shared mobility this book introduces new concepts like zero car ownership communities and changes to urban design centered on access to automated transportation instead of forecasting specific timelines for automated driving milestones this book engages in backcasting identifying how to achieve a desirable future the end of driving automated cars sharing vs owning and the future of mobility makes a compelling case that while private vehicle ownership is likely to remain dominant a transportation system with greater shared mobility is still possible and preferable achieving it however will require strategic policy interventions to overcome deeply ingrained behavioral patterns and market forces that favor ownership offers a workable public transit solution design melding the traditional acquire and operate mode with the absorption of new technology provides a step by step discussion of digital systems designs and effective regulation by data approaches needed for a new urban mobility learning aids include case study scenarios chapter objectives and discussion questions sidebars a glossary and updated exercises for student readers at the end of every chapter new to the second edition entirely new chapters on beyond personal mobility including packages and cargo and the path to zero car ownership plus new coverage of the complementary role of fixed route surface modes urban air mobility the demise of first generation slow speed vehicle automation and more
