in 1895 an english farmer diverted the course of a stream that was flowing through his land thereby cutting off the supply to the water reservoir of the neighboring community the courts established that it had been his purpose to injure the plaintiffs by carrying off the water and to compel them to buy him off regardless of what the law says most people will feel that the farmer s intentions were morally unjust he was trying to abuse his property rights in order to take advantage of others yet as gijs van donselaar explains the major traditions in the theory of economic justice both from the libertarian right and from the egalitarian left have failed to appreciate the moral objection to exploitative behavior that this case displays those traditions entertain radically opposed views on how private property should be distributed but they do not consider the legitimacy of constraints on the exercise of property rights however they are distributed the second part of the book demonstrates how this failure clears the way for a recent egalitarian argument gaining in popularity for a so called unconditional basic income if all have an initial right to an equal share of the resources of the world then it soon seems to follow that all have a right to an equal share of the value of the resources of the world which could be cashed in as a labor free income that inference is only valid if moral behavior similar to that of the farmer is tolerated van donselaar argues that ultimately a confusion about the nature and value of freedom of choice is responsible for the odd conception of private rights in resources that would justify exploitation

this book describes different control strategies adapted to heat pumps at the purpose of increasing energy flexibility in buildings it reports on the development of both simple rule based controls rbc and advanced model predictive controls mpc these are tested and compared in both simulation and experimental setups the book analyzes in detail all the different steps including the development and tuning of the controllers their testing in experimental settings and simulation studies bridging between advanced control systems theory concepts and practical needs and discussing the advantages and main challenges of mpc and rbc controllers in terms of efficiency of heat pump operation electricity prices emission values and users comfort this book offers an in depth evaluation of innovative control strategies applied to energy demand management in buildings

in a range of contexts including human smuggling employment and medicine we often hear claims that a person has exploited someone else's hopes despite this it remains unclear what it means to exploit hope what is wrong with doing so and what to do about it in this book jeremy snyder offers an account of the ethical nature of exploiting hope understood as taking advantage of a vulnerability in which one is partially entrusted he then discusses how hope is exploited when individuals seek out unproven medical interventions through clinical trials stem cell interventions right to try legislation and crowdfunding
