the surveillance systems project is directed toward increasing knowledge related to the techniques and procedures for interpreting aerial imagery and reducing extracted information to its most usable form one task specifically concerned with image interpretation displays conducts research to develop improved reference materials to assist image interpreters in locating and correctly identifying objects of military significance in aerial photographs specially developed reference keys are tested in controlled studies with interpreter output measures as criteria the present publication describes one of the first such studies an error key developed through

analysis of interpreter errors and designed to help interpreters avoid common misidentifications and a rights key similar to keys currently used by image interpreters were provided to accompany two sets of aerial imagery two performance measures based on this imagery were administered to three matched groups of interpreter trainees one group used the error key another group used the rights key and a control group used no reference key performance data for the three groups correct identifications errors and interpreters confidence in their identifications were analyzed the error keys resulted in substantial decrease in errors and increase in accuracy but no difference in number of correct identifications they also affected the differential between interpreters confidence in right and wrong identifications increasing the amount of difference in one performance measure and decreasing the amount in the other the rights key did not have a significant effect on any aspect of performance measured

although cryptography plays an essential part in most modern solutions especially in payments cryptographic algorithms remain a black box for most users of these tools just as a sane backend developer does not drill down into low level disk access details of a server filesystem payments professionals have enough things to worry about before they ever need to bother themselves with debugging an encrypted value or a message digest however at a certain point an engineer faces the need to identify a problem with a particular algorithm or perhaps to create a testing tool that would simulate a counterpart in a protocol that involves encryption the world of cryptography has moved on with giant leaps available technical standards mention acronyms and link to more standards some of which are very large while others are not available for free after finding the standards for the algorithm the specific mode of operation must also be identified most implementations use several cryptographic primitives for example key derivation with a block cipher which produces a secret that is used together with a hash function and a double padding scheme to produce a digital signature of a base64 encoded value understanding this requires more sifting through online sources more reading of platform and library documents and finally when some code can be written there are very few test cases to validate it cryptography for payment professionals is intended for technical people preferably with some background in software engineering who may need to deal with a cryptographic algorithm in the payments realm it does not cover the payment technology in depth nor does it provide more than a brief overview of some regulations and security standards instead it focuses on the cryptographic aspects of each field it mentions highlights include major cryptographic algorithms and the principles of their operation cryptographic aspects of card present e g magnetic stripe emv and online e g e commerce and 3ds 2 0 transactions a detailed description of tdes dukpt and aes dukpt protocols as well as an example implementation and test cases for both it is best if the reader understands programming number and string representations in machine memory and bit operations knowledge of c python or java may make the examples easier to read but this is not mandatory code related to the book is available at the author s github site github.com/ilya-dubinsky/cfpp
