human language technology hlt and natural language processing nlp systems have typically focused on the factual aspect of content analysis other aspects including pragmatics opinion and style have received much less attention however to achieve an adequate understanding of a text these aspects cannot be ignored the chapters in this book address the aspect of subjective opinion which includes identifying different points of view identifying different emotive dimensions and classifying text by opinion various conceptual models and computational methods are presented the models explored in this book include the following distinguishing attitudes from simple factual assertions distinguishing between the author s reports from reports of other people s opinions and distinguishing between explicitly and implicitly stated attitudes in addition many applications are described that promise to benefit from the ability to understand attitudes and affect including indexing and retrieval of documents by opinion automatic question answering about opinions analysis of sentiment in the media and in discussion groups about consumer products political issues etc brand and reputation management discovering and predicting consumer and voting trends analyzing client discourse in therapy and counseling determining relations between scientific texts by finding reasons for citations generating more appropriate texts and making agents more believable and creating writers aids the studies reported here are carried out on different languages such as english french japanese and portuguese difficult challenges remain however it can be argued that analyzing attitude and affect in text is an nlp complete problem

introductory texts on psychological testing and evaluation historically are not in short supply typically however such texts have been relatively superficial in their discussion of clinical material and have focused primarily on the theoretical and psychometric properties of individual tests more practical clinically relevant presentations of psychological instruments have been confined to individual volumes with advanced and often very technical information geared to the more sophisticated user professors in introductory graduate courses are often forced to adopt several advanced texts to cover the material at the same time helping students wade through unnecessary technical information in order to provide a basic working knowledge of each test understanding psychological assessment is an attempt to address these concerns it brings together into a single volume a broad sampling of the most respected instruments in the psychologist s armamentarium along with promising new tests of cognitive vocational and

personality functioning additionally it presents the most updated versions of these tests all in a practical clearly written format that covers the development psychometrics administrative considerations and interpretive hypotheses for each instrument clinical case studies allow the reader to apply the interpretive guidelines to real clinical data thereby reinforcing basic understanding of the instrument and helping to insure that both the student and practitioner can actually begin to use the test understanding psychological assessment includes cognitive and personality tests for adults children and adolescents as well as chapters on the theory of psychological measurement and integrated report writing
