the textbook is designed to help readers consider how evaluation can achieve these purposes as in previous editions our book is one of the few to introduce readers to both the different approaches to evaluation and practical methods for conducting it

ingrained for many years in the science of educational assessment were a large number of truths about how to make sense out of testing results artful wisdoms that appear to have held away largely by force of habit alone practitioners and researchers only occasionally agreed about how tests should be designed and were even further apart when they came to interpreting test responses by any means other than categorically right or wrong even the best innovations were painfully slow to be incorporated into practice the traditional approach to testing was developed to accomplish only two tasks to provide ranking of students or to select relatively small proportions of students for special treatment in these tasks it was fairly effective but it is increasingly seen as inadequate for the broader spectrum of issues that educational measurement is now called upon to address today the range of questions being asked of educational test data is itself growing by leaps and bounds fortunately to meet this challenge we have available a wide panoply of resource tools for assessment which deserve serious attention many of them have exceptionally sophisticated mathematical foundations and succeed well where older and less versatile techniques fail dismally yet no single new tool can conceivably cover the entire arena

in nature lies the solution to restore teeth with minimal damage in this groundbreaking book the management of dental challenges is presented from a new perspective natural conservative dentistry an alternative approach to solve restorative problems provides evidence based solutions to dental challenges to researchers practitioners and dental service providers the main attribute of all these solutions is that they are all derived from natural ingredients natural ingredients are an effective alternative for dental care and management in contrast to synthetic products that have multiple side effects this book fills a knowledge gap on alternative and sustainable solutions derived from nature to respond

effectively to dental challenges encountered in dental treatment for the conservation of the tooth it is a compilation of the work of expert dentists that has been carried out in clinics for the management of dental problems key features provides an insightful look at the prevention of dental diseases through evidence based interventions using natural products in 9 referenced chapters contains valuable contributions in restorative dentistry such as caries prevention enamel and dentin remineralization dentin biomodification dentin desensitization vital pulp therapy antioxidants and tooth bleaching provides an update on the current status of different ingredients used in oral health care products developed for commercial markets includes notes on pathophysiology and diagnosis on specific conditions and sources of natural ingredients the book is a valuable reference for trainees and professionals who want to enhance their restorative dentistry practice in the clinic
