the aim of the watching series is to draw attention to some of the very interesting items around us things that perhaps we don't notice as much as we might the first was bridge watching and when this was put on the net it produced to the surprise of the author such a pleasant flood of e mail that another was written called water watching this too was kindly received so it was tempting to continue with the theme roof watching is an invitation to look at the top covering of buildings our eyes are set in our faces so that they look horizontally hence in the ordinary way

people mostly look straight ahead and don't look up as much as they might if they did this too much they might not see objects at ground level and so bump into things of course on the other hand there is a good deal above eye level that is worth seeing it is not only the outside of a roof that is of interest inside they're all sorts of intriguing things if you hadn't thought much about it before you may be surprised at what goes on inside the roof space and what holds it all up so inside and outside the roof is worth some attention not only when complete but during its construction too a building site can be worth a visit at any stage of the construction it is particularly so when the roof is being built the variety of shapes textures and colours of the covering provides a fascinating display to delight the eye and enchant the enquiring mind knowing something of the why and the how can add much to the absorbing pastime of just looking at roofs

jointly sponsored by the china university of mining and technology and the university of nottingham uk a total of 187 papers have been included in the proceedings of which fifty two are contributed by authors outside of china scholars and experts from both china and abroad discuss and exchange information on the latest developments in mining science and technology worldwide which cover extensive areas ranging from mine operation and safety technology geology and methane drainage geomechanics mine construction and tunnelling mineral processing and clean coal technology mine control and automation to mine environment mine economics and management

the past two decades have seen revolutionary shifts in our ability to navigate inhabit and define the spatial realm the data flows that condition much of our lives now regularly include global positioning system gps readings and satellite images of a quality once reserved for a few militaries and intelligence agencies and powerful geographic information system gis software is now commonplace these new technologies have raised fundamental questions about the intersection between physical space and its representation virtual space and its realization in close up at a distance laura kurgan offers a theoretical account of these new digital technologies of location and a series of practical experiments in making maps and images with spatial data neither simply useful tools nor objects of wonder or anxiety the technologies of gps gis and satellite imagery become in this book the subject and the medium of a critical exploration close up at a distance records situations of intense conflict and struggle on the one hand and fundamental transformations in our ways of seeing and of experiencing space on the other kurgan maps and theorizes mass graves incarceration patterns disappearing forests and currency flows in a series of cases that range from kuwait 1991 to kosovo 1999 new york 2001 to indonesia 2010 using digital spatial hardware and software designed for military and governmental use in reconnaissance secrecy monitoring ballistics the census and national security kurgan engages and confronts the politics and complexities of these technologies and their uses at the intersection of art architecture activism and geography she uncovers in her essays and projects the opacities inherent in the recording of information and data and reimagines the spaces they have opened up
