knowledge of and skill in physics are essential foundations for studies in science and engineering this book offers students an introduction to the basic concepts and principles of physics it covers various topics specifically related to waves sound electricity magnetism and optics each chapter begins with a summary of concepts principles definitions and formulae to be discussed as well as ending with problems and solutions that illustrate the specific topic steps are detailed to help build reasoning and understanding there are 250 worked problems and 100 exercises in the book as well as 280 figures to help the reader visualize the processes being addressed computer calculations and solutions are carried out using wxmaxima to give insight and help build computational skills the book is aimed at first year undergraduate students studying introductory physics and would also be useful for physics teachers in their instruction particularly the exercises at the end of each chapter

this third volume of problems from the william lowell putnam competition is unlike the previous two in that it places the problems in the context of important mathematical themes the authors highlight connections to other problems to the curriculum and to more advanced topics the best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates the solutions have been compiled from the american mathematical monthly mathematics magazine and past competitors multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand in addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition the book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

responding to the international problem identified by the us national commission on excellence in educational administration that the field of educational leadership lacks a good definition this book reports a collaboration process that produced a practical theory of educative leadership in offering a holistic theory which deals with the abstract world of ideas and reflection this volume shows how these ideas are translated into management practice and what happens or what is likely to happen in such a process the theory integrates management and evaluation with the philosophical strategic political and inspirational services that educative leaders give it is aimed at lecturers in education administration management headteachers med lecturers and students leadership and management lecturers and students

as the share of renewable generation increases in electric grids the traditionally heat driven operation of combined heat and power plants chps reaches its limits thermal storage is required for a flexible operation of chps this work proposes three novel methods to use a heating grid as thermal storage by exploiting its thermal dynamics these include the first approach proving global optimality a novel linear formulation of grid dynamics and an easily real world applicable approach

this book contains a selection of more than 500 mathematical problems and their solutions from the phd qualifying examination papers of more than ten famous american universities the problems cover six aspects of graduate school mathematics algebra differential geometry topology real analysis complex analysis and partial differential equations the depth of knowledge involved is not beyond the contents of the textbooks for graduate students while solution of the problems requires deep understanding of the mathematical principles and skilled techniques for students this book is a valuable complement to textbooks for lecturers teaching

as the age of big data emerges it becomes necessary to take the five dimensions of big data volume variety velocity volatility and veracity and focus these dimensions towards one critical emphasis value the encyclopedia of business analytics and optimization confronts the challenges of information retrieval in the age of big data by exploring recent advances in the areas of knowledge management data visualization interdisciplinary communication and others through its critical approach and practical application this book will be a must have reference for any professional leader analyst or manager interested in making the most of the knowledge resources at their disposal

groundwater constitutes an important component of many water resource systems supplying water for domestic use for industry and for agriculture management of a groundwater system an aquifer or a system of aquifers means making such decisions as to the total quantity of water to be withdrawn annually the location of wells for pumping and for artificial recharge and their rates and control conditions at aquifer boundaries not less important are decisions related to groundwater quality in fact the quantity and quality problems cannot be separated in many parts of the world with the increased withdrawal of ground water often beyond permissible limits the quality of groundwater has been continuously deteriorating causing much concern to both suppliers and users in recent years in addition to general groundwater quality aspects public attention has been focused on groundwater contamination by hazardous industrial wastes by leachate from landfills by oil spills and by agricultural activities such as the use of fertilizers pesticides and herbicides and by radioactive waste in repositories located in deep geological formations to mention some of the most acute contamination sources in all these cases management means making decisions to achieve goals without violating specified constraints in order to enable the planner or the decision maker to compare alternative modes of action and to ensure that the constraints are not violated a tool is needed that will provide information about the response of the system the aquifer to various alternatives

in a simple straightforward manner this book presents most of the major process units for wastewater treatment addressing what the unit is and how it basically works along with that it provides some of the math problems associated with each unit each math problem presented in english units is usually followed by a nearly identical problem in metric units it also presents new concepts such as information on process microbiology in a comfortable language so the reader can concentrate on the subject matter instead of the language used to present it simplified wastewater treatment plant operations provides comprehensive and

technically accurate wastewater information in a clear and concise manner the related workbook provides readers with a place to write in answers and work out problem solutions

triz is a brilliant toolkit for nurturing engineering creativity and innovation this accessible colourful and practical guide has been developed from problem solving workshops run by oxford creativity one of the world's top triz training organizations started by gadd in 1998 gadd has successfully introduced triz to many major organisations such as airbus sellafeld sites saint gobain dca doosan babcock kraft qinetiq trelleborg rolls royce and bae systems working on diverse major projects including next generation submarines chocolate packaging nuclear clean up sustainability and cost reduction engineering companies are increasingly recognising and acting upon the need to encourage successful practical and systematic innovation at every stage of the engineering process including product development and design triz enables greater clarity of thought and taps into the creativity innate in all of us transforming random ineffective brainstorming into targeted audited creative sessions focussed on the problem at hand and unlocking the engineers knowledge and genius to identify all the relevant solutions for good design engineers and technical directors across all industries as well as students of engineering entrepreneurship and innovation triz for engineers will help unlock and realise the potential of triz the individual tools are straightforward the problem solving process is systematic and repeatable and the results will speak for themselves this highly innovative book satisfies the need for concise clearly presented information together with practical advice on triz and problem solving algorithms employs explanatory techniques processes and examples that have been used to train thousands of engineers to use triz successfully contains real relevant and recent case studies from major blue chip companies is illustrated throughout with specially commissioned full colour cartoons that illustrate the various concepts and techniques and bring the theory to life turns good engineers into great engineers

problem based learning pbl is a pedagogical approach that has the capacity to create vibrant and active learning environments in higher education however both experienced pbl practitioners and those new to pbl often find themselves looking for guidance on how to engage and energise a pbl curriculum new approaches to problem based learning revitalising your practice in higher education provides that guidance from a range of different complementary perspectives leading practitioners in the field as well as new voices in pbl teaching and learning have collaborated to produce this text each chapter provides practical and experienced accounts of issues and ideas for pbl as well as a strong theoretical and evidence base whether you are an experienced pbl practitioner or new to the processes and principles of pbl this book will help you to find ways of revitalising and enriching your practice and of enhancing the learning experience in a range of higher
