in works righteousness anna l peterson examines the place of practice in  
contemporary ethical theory peterson argues that rather than assuming  
that pre established moral ideas guide action ethicists should acknowledge  
and explore the relationship between ideas actions and results both an  
analysis of alternative models in which practice plays a stronger role and an  
argument for taking practice more seriously in broad questions of ethics as  
well as in concrete case studies works righteousness contends that what we  
do generates and alters our values just as often as expressed values  
motivate or guide the ways we act peterson here challenges prevailing  
philosophical and religious theories that ideas are what truly matter  
underlining the value of attention to people s concrete experiences and  
highlighting the relevance of theoretical insights to contemporary social  
issues such as climate change euthanasia and hate speech through  
examinations of pragmatism marxism and religious pacifism all of which  
significantly highlight a practice focused approach works righteousness  
addresses the way social structures condition moral ideas and actions the  
dangers of thinking about moral problems as polarized dilemmas and the  
complex mutual shaping of ideas and actions

on the occasion of the sixtieth birthday of andre lichnerowicz a number of his friends many of whom have been his students or coworkers decided to celebrate this event by preparing a jubilee volume of contributed articles in the two main fields of research marked by lichnerowicz s work namely differential geometry and mathematical physics limitations of space and time did not enable us to include papers from all lichnerowicz s friends nor from all his former students it was equally impossible to reflect in a single book the great variety of subjects tackled by lichnerowicz in spite of these limitations we hope that this book reflects some of the present trends of fields in which he worked and some of the subjects to which he contributed in his long and not yet finished career this career was very much marked by the influence of his masters elie cartan who introduced him to research in mathematics mainly in geometry and its relations with mathematical physics and georges darmois who developed his interest for mechanics and physics especially the theory of relativity and electromagnetism this particular combination and his personal talent made of him a natural scientific heir and continuator of the french mathematical physics school in the tradition of henri poincare some of his works would even be best qualified by a new field name that of physical mathematics branches of pure mathematics entirely motivated by physics
