grennan bases his evaluation of arguments on two criteria logical adequacy and pragmatic adequacy he asserts that the common formal logic systems while logically sound are not very useful for evaluating everyday inferences which are almost all deductively invalid as stated turning to informal logic he points out that while more recent informal logic and critical thinking texts are superior in that their authors recognize the need to evaluate everyday arguments inductively they typically cover only inductive fallacies ignoring the inductively sound patterns frequently used in successful persuasion to redress these problems grennan introduces a variety of additional inductive patterns concluding that informal logic texts do not encourage precision in evaluating arguments grennan proposes a new argument evaluation procedure that expresses judgments of inferential strength in terms of probabilities based on theories of stephen toulmin roderick chisholm and john pollock his proposed system allows for a more precise judgment of the persuasive force of arguments

randy ramal argues that philosophy s main responsibility lies in providing intelligibility to the ordinary language of everyday life while dispelling unwarranted skepticism philosophers need to go the hard way to fulfill this responsibility because of the constant and dangerous temptation to turn philosophy into a normative discipline rather than keep it as a descriptively hermeneutical enterprise in on philosophy intelligibility and the ordinary going the bloody hard way the philosophy of alfred north whitehead is central to ramal s endeavor to demonstrate the need to separate the hermeneutical responsibility of philosophy from the normative aspects of responsibility while showing the futility of labeling whitehead as a purely disinterested philosopher who abandons the idea that ordinariness is relevant to good philosophical thinking ramal frames this discussion within a larger in depth engagement with a vast number of thinkers philosophers and literary figures whose works touch on the question of the ordinary

it is with great pleasure that we are presenting to the community the second edition of this extraordinary handbook it has been over 15 years since the publication of the first edition and there have been great changes in the landscape of philosophical logic since then the first edition has proved invaluable to generations of students and researchers in formal philosophy and language as well as to consumers of logic in many applied areas the main logic article in the encyclopaedia britannica 1999 has described the first edition as the best starting point for exploring any of the topics in logic we are confident that the second edition will prove to be just as good the first edition was the second handbook published for the logic community it followed the north holland one volume handbook of mathematical logic published in 1977 edited by the late jon barwise the four volume handbook of philosophical logic published 1983 1989 came at a fortunate temporal junction at the evolution of logic this was the time when logic was gaining ground in computer science and artificial intelligence circles these areas were under increasing commercial pressure to provide devices which help and or replace the human in his daily activity this pressure required the use of logic in the modelling of human activity and organisation on the one hand and to provide the theoretical basis for the computer program constructs on the other

the present work constitutes an effort to approach the subject of symbolic logic at the elementary to intermediate level in a novel way the book is a study of a number of systems their methods their relations their differences in pursuit of this goal a chapter explaining basic concepts of modern logic together with the truth table techniques of definition and proof is first set out in chapter 2 a kind of *ur* logic is built up and deductions are made on the basis of its axioms and rules this axiom system resembling a propositional system of hilbert and bernays is called *p* since it is a positive logic i.e. a logic devoid of negation this system serves as a basis upon which a variety of further systems are constructed including among others a full classical propositional calculus an intuitionistic system a minimum propositional calculus a system equivalent to that of f b fitch chapters 3 and 6 these are developed as axiomatic systems by means of adding independent axioms to the basic system *p* the notions of independence both for primitive functors and for axiom sets are discussed the axiom sets for a number of such systems e.g. frege's propositional calculus being shown to be non independent equivalence and non equivalence of systems are discussed in the same context the deduction theorem is proved in chapter 3 for all the axiomatic propositional calculi in the book

the task of the book is not to give a survey of the main theories on truth found in the literature there are several

books available which do this the one of david for deflationist and disquotational theories of truth that of chapuis for revision theories of truth that of kirkham for correspondence theories and several others that of fresher for coherence theories of truth moreover the book is not an analysis just of tarski's theory like that of moreno or the respective chapters in kirkham though tarski's theory plays an important role in the whole work presented the task of the book is to give a detailed answer to some basic questions on truth which have been perennial problems through the centuries and are still discussed today the answer is given in the light of our knowledge today and with the help of modern logic but the book explicitly aims at connecting recent problems with related ones in the whole history of philosophy the method to incorporate important philosophers of the tradition into the analysis is that of disputation i.e. of putting some of their main thesis into objections or counterobjections pro or contra a positive answer to the respective question after the pros and cons are given a detailed answer to the question is proposed and finally commentaries and corrections are given to the objections and counterobjections in the light of the proposed answer
