this united nations report examines the current state of knowledge of the world s oceans for policymakers and provides a reference for marine science courses

this book underpins the geography of the black sea covering topics such as morphology morphography geology and history of the black sea it also discusses environmental aspects affecting the population in the black sea s coastal settlements and looks to the future of the black sea region this book covers a gap in research in the field of world regional geography of the black sea by providing a comprehensive methodology and terminology to readers students and teachers in the field

as the arctic perennial sea ice continues to disappear at an alarming rate a full understanding of sea ice as a crucial global ecosystem and the effects of its loss is vital for all those working with and studying global climate change building on the success of the

previous edition the second edition of sea ice now much expanded and in full colour throughout includes six completely new chapters with complete revisions of all the chapters included from the first edition the editors professor david thomas and dr gerhard dieckmann have once again drawn together an extremely impressive group of internationally respected contributing authors ensuring a comprehensive worldwide coverage of this incredibly important topic sea ice second edition is an essential purchase for oceanographers and marine scientists environmental scientists biologists geochemists and geologists all those involved in the study of global climate change will find this book to contain a wealth of important information all libraries in universities and research establishments where these subjects are studied and taught will need multiple copies of this book on their shelves truly multidisciplinary approach world leading authors and editors international in scope covering both arctic and antarctic work of vital interest to all those involved in global warming and climate change research highly illustrated full colour book with colour images throughout

sea ice the latest edition of the gold standard in sea ice references in the newly revised second edition of sea ice physics and remote sensing a team of distinguished researchers delivers an in depth review of the features and structural properties of ice as well as the latest advances in geophysical sensors ice parameter retrieval techniques and remote sensing data the book has been updated to reflect the latest scientific developments in macro and micro scale sea ice research for this edition the authors have included high quality photographs of thin sections from cores of various ice types as well as a comprehensive account of all major field expeditions that have systematically surveyed sea ice and its properties readers will also find a thorough introduction to ice physics and physical processes including ice morphology and age based structural features practical discussions of radiometric and radar scattering observations from sea ice including radar backscatter and microwave emission the latest techniques for the retrieval of sea ice parameters from space borne and airborne sensor data new chapters on sea ice thermal microwave emissions and on the impact of climate change on polar sea ice perfect for academic researchers working on sea ice the cryosphere and climatology sea ice physics and remote sensing will also benefit meteorologists marine operators and high latitude construction engineers

this book computer modelling of seas and coastal regions is the first volume of the two volume proceedings of the international conference on computer modelling of seas and coastal regions and boundary elements and fluid dynamics held in southampton u k in april 1992 the importance of accurate modelling of seas and coastal regions is emphasized by the need for predicting their behaviour under extreme conditions problems such as pollution of these areas have become a major international concern and the related environmental problems need further study using techniques which can be used to determine the ways in which the water systems respond to different effects and try to minimize the damage they

can also lead to the development of early warning systems in combination with remote sensing equipment and experimental sampling techniques furthermore once a disaster occurs the model can be used to optimize the use of the available resources the conference addresses coastal region modelling both under normal and extreme conditions with special reference to practical problems currently being experienced around the world many of the delegates are actively involved in the modelling of seas and coastal regions this volume includes sections on waves tides shallow water circulation and channel flow siltation and sedimentation pollution problems and computational techniques the organizer would like to thank the international scientific advisory committee the conference delegates and all those who have actively supported the meeting

beowulf is by far the most popular text of the medieval world taught in american classrooms at both the high school and undergraduate levels more students than ever before wrestle with grendel in the darkness of heorot or venture into the dragon's barrow for gold and glory this increase of attention and interest in the old english epic has led to a myriad of new and varying translations of the poem published every year the production of several mainstream film and television adaptations and many graphic novel versions more and more teachers in all sorts of classrooms with varying degrees of familiarity and training are called upon to bring this ancient poem before their students this practical guide to teaching beowulf in the twenty first century combines scholarly research with pedagogical technique imparting a picture of how the poem can be taught in contemporary american institutions

national and international agencies need assessments of change in ecosystems and their drivers in order to sustain natural systems to maintain the delivery of services and to meet the challenge for conserving earth ecosystems in the long term in marine systems change may arise directly from human activities e.g. fisheries indirectly from local or global activities cascading effects through food webs from fisheries or changing environments from climate change and/or ocean acidification or from naturally varying processes a particular challenge for managers is to identify how dangerous future climate change will be for ecosystems and their services and whether mitigation or adaptation may be needed in advance in order to achieve the conservation requirements for regions of international attention particularly those that have the attention of many management or policy oriented bodies a standardized process is needed to harmonize the scientific information on the status and trends in ecosystems used by the different bodies that process also needs to ensure the information is available in a timely manner for example assessments of change in habitats species and/or food webs in the southern ocean are currently compiled separately for at least ten different international organizations or processes a marine ecosystem assessment for the southern ocean measo aims to harmonize that information for policy makers this assessment began with an international conference in april 2018 measo2018 aq where it was agreed to undertake the first measo over 2018-2019 with the view to provide the outcomes to relevant

bodies such as the scientific committee for the conservation of antarctic marine living resources soon after
