the fao thiaroye fish processing technique ftt was developed in 2008 2009 by the food and agriculture organization fao of the united nations in collaboration with the centre national de formation des techniciens des pêches et de l'aquaculture in senegal the goal in developing this technique was to solve many issues inherent to traditional fish smoking methods in terms of health safety and the environment after the ftt was developed in senegal many other countries in sub saharan africa have adopted this new method while others are considering doing so using côte d ivoire as the benchmark country for introducing the ftt in small scale fisheries this study was based on the assumption that it would be risky to increase the number of these kilns without first establishing their profitability to do this the field study combined qualitative and quantitative methods with institutional partners in abidjan and with fish processors at three of the four pilot ftt processing facilities abobo doumé braffedon and guessabo

cichlid fishes are amazing creatures in terms of sheer number of species they are the most successful of all families of vertebrate animals and the extent and speed with which they have evolved in some african lakes has made them the darlings of evolutionary biologists but what truly captivates biologists like george barlow not to mention thousands of aquarists the world over is the complexity of their social lives and their devotion to family most species of cichlids are monogamous and many pairs share the responsibility of raising offspring in this wonderful book barlow describes the unusually high

intelligence of these fishes their complex mating and parenting rituals their bizarre feeding and fighting habits and the unusual adaptations and explosive rate of speciation that have enabled them to proliferate and flourish a celebration of their diversity the cichlid fishes is also a marvelous exploration of how these unique animals might help resolve the age old puzzle of how species arise and evolve

darwin s book on evolution admitted that intermediate links were perhaps the most obvious and serious objection to the theory of evolution darwin recognized that the fossils collected by scientists prior to 1859 did not correspond with his theory of evolution but he predicted that his theory would be confirmed as more and more fossils were found one hundred and fifty years later evolution the grand experiment critically examines the viability of darwin s theory
