every fifty years the galaxies fall silent trade routes still shimmer with ships but their weapons are sealed their codes rewritten for peace across nine sectors of the known universe every commander engineer and soldier bows to one sacred interval the martian games for three days war becomes sport and peace becomes spectacle the greatest minds unveil technologies not yet tested in battle engines that fold light into sound armor that remembers its wearer's heartbeat ships that can split into ten and fight as one the martian games are not meant for death though death often attends they are meant for balance for release for the illusion that peace can be entertained into permanence each sector sends its champions sworn to the ancient peace accord the oath that forbids conquest during the games victories are measured in innovation and endurance not annihilation for nearly a thousand years that oath held until now this cycle the stakes changed a new clause subtle and legal opened a door long thought closed any unclaimed or uninhabited sector discovered through the games would belong to the victor it was meant to inspire exploration to stretch imagination across the cold edges of the map instead it drew the attention of something waiting beyond the map itself when the invitation arrived from a distant galaxy unsigned yet sealed with the code of ancient authority the council of games could not refuse tradition demanded inclusion no species had ever been denied they assumed it was a forgotten civilization perhaps an isolated empire returning to unity they were wrong what entered the arena was not a civilization it was a contagion they came without a name without record yet older than recorded time legends had whispered of them in dying dialects world eaters light drinkers beings who moved from galaxy to galaxy like a famine dressed in gold the stories had always been dismissed as myth the kind told to children before sleep but myth has memory and when the first fleet arrived through the red mist above mars the galaxies realized too late that the myth had been waiting for the invitation now the nine sectors divided for centuries by pride and blood must stand as one or vanish as memory themselves the martian games have begun and peace is no longer the prize

marshwalk one first steps on a new planet addresses the question of why we should embark on a journey to mars documenting what the first human crew will do when they place their feet in the red dust of the planet the book also addresses why we need to carry out these tasks and more importantly what a human crew could achieve that an automated mission could not understanding the clear benefits of sending a human crew to the surface of mars and how these benefits can be seen back on earth is the key to sustained long term public and political support for the programme in terms of cash and commitment the book accepts that the journey will be made but does not specify precisely when flight time and how to get to and from the planet are discussed briefly to understand why the suggested duration spent at mars is reasonable the main objective of the work is to look at what science will be done on the surface supported by orbital operations and what hardware and technology will be employed to achieve the mission objectives this analysis is drawn from previous experiences in manned and unmanned space programmes including apollo skylab salyut mir shuttle and iss viking luna lunokhod and recent mars missions such as pathfinder and global surveyor in addition new interviews with key personalities involved in planning martian exploration and discussions about current thoughts on what we need to accomplish on mars when we get there will provide a lively and thought provoking account that could generate fresh debate when the decision is finally made to go to mars it will be made in the knowledge that most of the world knows why we are going and what benefits mankind will see for the effort the authors primary objective is to begin this understanding

on the 20th anniversary of the first human landing on the moon president george h w bush stood atop the steps of the national air and space museum in washington d c and proposed a long range human exploration plan that included the successful construction of an orbital space station a permanent return to the moon and a mission to mars this enterprise became known as the space exploration initiative sei the president charged the newly reestablished national space council with providing concrete alternatives for meeting these objectives to provide overall focus for the new initiative bush later set a thirty year goal for a crewed landing on mars within a few short years after this kennedyesque announcement however the initiative had faded into history the victim of a flawed policy process and a political war fought on several different fronts the story of this failed initiative was a tale of organizational cultural and personal confrontation by key protagonists and critical battles some commentators have argued that sei was doomed to fail due primarily to the immense budgetary pressures facing the nation during the early 1990s the central thesis of mars wars the rise and fall of the space exploration initiative suggests however that failure was not predetermined instead it was the result of a deeply flawed decision making process that failed to develop or even consider policy options that may have been politically acceptable given the existing political environment
