interest in implementation research is growing largely in recognition of the contribution it can make to maximizing the beneficial impact of health interventions as a relatively new and until recently rather neglected field within the health sector implementation research is something of an unknown quantity for many there is therefore a need for greater clarity about what exactly implementation research is and what it can offer this guide is designed to provide that clarity intended to support those conducting implementation research those with responsibility for implementing programs and those who have an interest in both the guide provides an introduction to basic implementation research concepts and language briefly outlines what it involves and describes the many opportunities that it presents the main aim of the guide is to boost implementation research capacity as well as demand for implementation research that is aligned with need and that is of particular relevance to health systems in low and middle income countries lmics research on implementation requires the engagement of diverse stakeholders and multiple disciplines in order to address the complex implementation challenges they face for this reason the guide is intended for a variety of actors who contribute to and or are impacted by implementation research this includes the decision makers responsible for designing policies and managing programs whose decisions shape implementation and scale up processes as well as the practitioners and front line workers who ultimately implement these decisions along with researchers from different disciplines who bring expertise in systematically collecting and analyzing information to inform implementation questions the opening chapters 1 4 make the case for why implementation research is important to decision making they offer a workable definition of

implementation research and illustrate the relevance of research to problems that are often considered to be simply administrative and provide examples of how such problems can be framed as implementation research questions the early chapters also deal with the conduct of implementation research emphasizing the importance of collaboration and discussing the role of implementers in the planning and designing of studies the collection and analysis of data as well as in the dissemination and use of results the second half of the guide 5 7 detail the various methods and study designs that can be used to carry out implementation research and using examples illustrates the application of quantitative qualitative and mixed method designs to answer complex questions related to implementation and scale up it offers guidance on conceptualizing an implementation research study from the identification of the problem development of research questions identification of implementation outcomes and variables as well as the selection of the study design and methods while also addressing important questions of rigor

abstract curricular program implementation in the context of randomized field trials gloria isabel miller this study examined three cases of commercially available curricular program implementations to determine if a unified approach to measuring the level of implementation was possible proof of concept further the study investigated whether the level of curriculum and implementation plan specificity made a difference to the strength of implementation achieved in classrooms and described the implementation evolution in different contexts the study sample consists of a total of 163 teachers in eight school districts across the united states in each case teachers were randomly assigned to using the curricular innovation or their currently used materials and processes the three cases hs math newscience and mathintervention were purposely chosen to represent three different points of curricular and implementation specificity and two different subject areas math and science each case features a commercially available program that also had opportunities for teachers to use electronic technology to enhance their learning or to engage their students the cases represent differing student grade levels the cases are different enough to provide a range that exercises the measurement techniques introduced in this study so results can begin to generalize across curricular programs and grades however the cases are similar enough in research design instrumentation and data collection methods to make them comparable a key contribution of this investigation is the creation of a framework to measure the level of implementation the extent to which the teacher and students display the actions behaviors and interactions expected by using the innovation the

unified conceptual framework arrived at by using an activity theory perspective together with the analytical methods employed provide a way to view the rich complex interaction of implementation as a system with the larger system of the school organization data from the analysis revealed that variations in the level of implementation were no different regardless of the level of specificity a strong finding of this work is that implementation evolves slowly even when the curricular program is scripted and coaching support is provided to teachers the paper concludes with implications for policy and future research
