this book defines the architecture requirements and minimum system requirements for a computer system that is designed to become an open industry standard these requirements provide a description of the devices interfaces and data formats required to design and build a powerpc based computer this standard is designed to provide software compatibility for several operating environments systems built to these requirements can use industry standard components currently found in ibm compatible and apple macintosh personal computers these systems are expected to run various future versions of operating systems including apple mac os tm ibm aix tm and powerpc tm editions of ibm os 2 warp connect tm microsoft windows nt tm workstation novell netware tm and sunsoft solaris tm this book is the primary source of information for anyone developing a hardware platform an operating system or hardware component to be part of these standard systems it describes the hardware to operating system interface that is essential to anyone building hardware platforms and provides the minimum system configurations that platform designers must meet when building a standard platform component manufacturers require this information to produce compatible chips

and adapters to use on these platforms and software developers require the information on mandatory functions and documented interfaces the architecture is intended to support a range of powerpc microprocessor based system implementations including portable desktop and server class systems and allows multiple operating system implementations across a wider range of environments and functions this enables new hardware and software enhancements that are necessary for the development of improved user interfaces higher performance and broader operating environments

wisdom is the principal thing therefore get wisdom and with all thy getting get understanding proverbs 4 7 in the early chapters of the book of proverbs there is a strong emphasis on three words knowledge understanding and wisdom perhaps we can apply these words to our philosophy behind the technology of predictive process control knowledge is the accumulation of information provided by education as we begin to store the data in our brains that should prepare us for the challenges of the manufacturing environment it applies to every level and every opportunity of education formal and informal this is simply to know without any requirement except a good memory and is the basis for the following two thoughts understanding is the assimilation of knowledge or the thinking process as we begin to arrange and rearrange the data we know for quick recall as it may be needed this also applies to every level and opportunity of education it is know why based upon what we know and it requires some scepticism of oversimplified answers and a hunger for mental consistency wisdom is the application of both knowledge and understanding in real life enterprises as we apply both our knowledge and understanding in those situations all three are further enhanced by each progressive experience this is that wonderful know how to apply our education based upon know why

which was based upon knowledge which provides the confidence we need to advance in all phases of performance

workflows may be defined as abstractions used to model the coherent flow of activities in the context of an in silico scientific experiment they are employed in many domains of science such as bioinformatics astronomy and engineering such workflows usually present a considerable number of activities and activations i e tasks associated with activities and may need a long time for execution due to the continuous need to store and process data efficiently making them data intensive workflows high performance computing environments allied to parallelization techniques are used to run these workflows at the beginning of the 2010s cloud technologies emerged as a promising environment to run scientific workflows by using clouds scientists have expanded beyond single parallel computers to hundreds or even thousands of virtual machines more recently data intensive scalable computing disc frameworks e g apache spark and hadoop and environments emerged and are being used to execute data intensive workflows disc

environments are composed of processors and disks in large commodity computing clusters connected using high speed communications switches and networks the main advantage of disc frameworks is that they support and grant efficient in memory data management for large scale applications such as data intensive workflows however the execution of workflows in cloud and disc environments raise many challenges such as scheduling workflow activities and activations managing produced data collecting provenance data etc several existing approaches deal with the challenges mentioned earlier this way there is a real need for understanding how to manage these workflows and various big data platforms that have been developed and introduced as such this book can help researchers understand how linking workflow management with data intensive scalable computing can help in understanding and analyzing scientific big data in this book we aim to identify and distill the body of work on workflow management in clouds and disc environments we start by discussing the basic principles of data intensive scientific workflows next we present two workflows that are executed in a single site and multi site clouds taking advantage of provenance afterward we go towards workflow management in disc environments and we present in detail solutions that enable the optimized execution of the workflow using frameworks such as apache spark and its extensions
