this book provides a comprehensive over view of eighteenth century british medical reform but as an economic historian buer considered the effect of diseases and medical intervention on population growth not on medical ideas other optimistic views of the century either focused like buer on the standard of living debate or a related debate about the role if any of hospitals

and public health measures in reducing mortality during the industrial revolution giving only passing attention to disease theory

Americans of the early republic devoted close attention to the question of what should be the proper relationship between church and state. Kabala examines this debate across six decades and shows that an understanding of this period is not possible without appreciating the key role religion played in the formation of the nation.

In late antiquity the rising number of ascetics who joined the priesthood faced a pastoral dilemma: should they follow a traditional demonstrably administrative approach to pastoral care emphasizing doctrinal instruction, the care of the poor, and the celebration of the sacraments, or should they bring to the parish the ascetic models of spiritual direction characterized by a more personal spiritual father–spiritual disciple relationship? Five models of spiritual direction in the early church explores the struggles of five clerics: Athanasius, Gregory Nazianzen, Augustine of Hippo, John Cassian, and Pope Gregory I, to reconcile their ascetic idealism with the reality of pastoral responsibility through a close reading of Greek and Latin texts. George E. Demacopoulos explores each pastor's criteria for ordination, his supervision of subordinate clergy, and his methods of spiritual direction. He argues that the evolution in spiritual direction that occurred during this period reflected and informed broader developments in religious practices. Demacopoulos describes the way in which these authors shaped the medieval pastoral traditions of the East and the West. Each of the five struggled to balance the tension between his ascetic idealism and the realities of the lay church; each offered distinct and at times very different solutions to that tension. The diversity among their models of spiritual direction demonstrates both the complexity of the problem and the variable nature of early Christianity. Scholars and students of late antiquity, the history of Christianity, and historical theology will find a great deal of interest in *Five Models of Spiritual Direction in the Early Church*. The book will also appeal to those who are actively engaged in Christian ministry.

Young children are intuitive scientists. This book builds on their inherent curiosity and problem solving as they move forward in their scientific thinking. Science develops from early beginnings, and a solid foundation in the early years is essential for their future learning and engagement with the subject. Starting Inquiry-Based Science in the Early Years shows you how you can support children's emerging scientific skills by working with them and scaffolding their inquiries as they experiment, hypothesize, and investigate, building on their natural curiosity. Full of practical advice, it offers a wide range of scientific activities that can be carried out in partnership with young children. Each activity presents a challenge for the child to solve by thinking and talking through their ideas and then carrying out their own investigations. This invaluable guide focuses on helping children to follow their own line of inquiry and supporting them in mastering the skills and vocabulary they need in order to do this. Features include an explanation of the key skills children need to acquire and practical ideas for developing these; useful lists of relevant vocabulary and everyday resources; cue questions to encourage children's thinking skills; cross-curricular links to show how the activities support early literacy and mathematics; providing a rich bank of resources for promoting scientific experiences and learning. This highly practical book will help you ensure that the children in your care have the strong foundations they need to become confident, successful scientists in the future.

This edited volume addresses the circulation of works of art, images, and ideas between the Iberian and Italian world and the subsequent responses. This motion generated amongst the themes discussed are the concepts of centre and periphery, replicas and alterations, and how items and ideas were reinterpreted. The processes of appropriation and transformation create an artistic geography of identities in which originality can be studied through the processes of assimilation of images shared between Europe, Asia, and America. Chapters challenge the negative

conceptualization of copying arguing that the copy is not simply a derivation but a new creation that is shaped by the interests and preferences of the receiver similarly contributors argue for a more nuanced concept of what exactly an artistic centre is the book will be of interest to scholars working in art history renaissance studies and iberian studies
